

Internet Safety

Safe Surfing Video: <https://youtu.be/yrln8nyVBLU>

Key things to remember:

You are responsible for what you post!

- Consider privacy, slander, harassment, and copyright laws.
- You can be sued.

Don't Tell Secrets!

- Once you put it up, it is there forever.
- Respect privacy laws when posting names, photos, and other information.

Be Truthful!

- Never misrepresent yourself or pretend to be someone else.
- Remember EVERYTHING is traceable.

Most Importantly - Be Respectful!

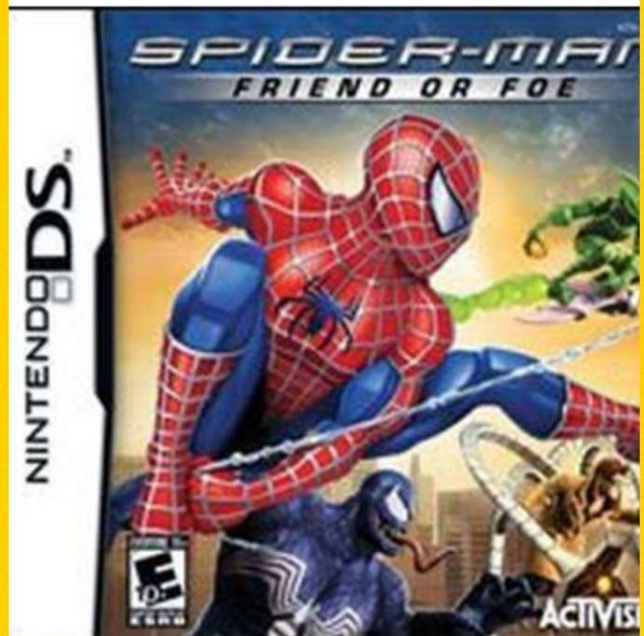

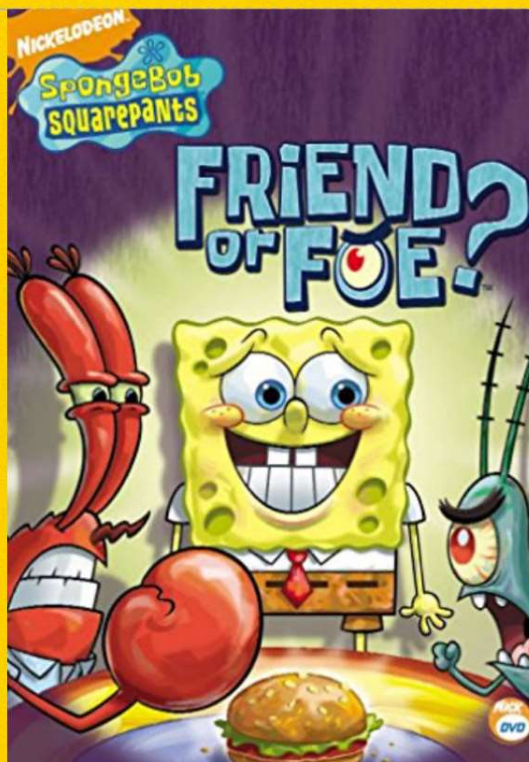

- Don't send emails that may hurt others or are against the law.
- Don't be rude or use abusive language in chats or email.
- Don't send emails when you are angry. Save it as a draft and re-read it the next day before sending.
- Don't share other people's private information.

My Internet Safety Checklist

- ☐ I don't give out my passwords.
- ☐ I have a "checker" friend who helps me keep my privacy safe and could help me if someone is being inappropriate or harmful to me online.
- ☐ I set time-limits for myself or try to maintain a fairly low percentage of time online or gaming online.
- ☐ I don't "friend" people I don't know, and I understand how to "unfriend", "unfollow" or say "no" in order to manage my online life.
- ☐ I don't click on links or images from people I don't know.
- ☐ I make sure I'm not posting other people's private information when I share posts.
- ☐ I don't post any personal information online.
- ☐ I don't share information that could allow someone to harm me.
- ☐ I am truthful, safe and respectful in all of my online dealings.

Friend or Foe

Brainstorm what makes a person a friend, or a foe. Are you familiar with any of the images below?

Consider Friend or Foe

- Stranger danger. The people you chat and play games with are strangers. Don't share personal information with them no matter how nice they are, or what they say.
- Really? A person's virtual character (a character or name they have created to use in the game) is not always a true representation of who that person is. Don't assume a man is a man and a woman is a woman, or that they are who they say they are.

"Stranger Danger" of the Past: Links and Malware

- With Threats. Hackers used to have it so easy. You'd be watching skateboarding or dog videos, and then *DING!*, a new email would come in. It'd be someone telling you that you owed money and must pay up *or else*. But we've gotten smart about that kind of thing. So now hackers have a new way of getting personal information from us. *How are they doing it?*

"Stranger Danger" of Today: Impersonation

- Or Treats! By **impersonating** a legitimate person with whom the victim has a pre-existing relationship. Maybe the email would be from your friend John, and he'd have a funny video you just *had* to see.
- Of course, your friend John is actually the victim of a hacker using his identity. **They just wanted you to click their link!**
